Pentera - Proposal for PMO

THE PENTERA SOLUTION

Pentera, the award-winning automated penetration testing platform, uses algorithms to scan and ethically penetrate enterprise networks with the latest hacking techniques, while prioritizing remediation efforts with a threat-facing perspective.

The platform enables organizations to focus their resources on the remediation of vulnerabilities and security controls that take part in a damaging "kill chain" without the need to chase down thousands of vulnerabilities that cannot be truly exploited towards data theft, encryption or service disruption.
