Skills

Vanilla Javascript / ES6

Angular / Typescript / RxJS

HTML / CSS / SASS / AJAX

C# / .NET Framework / MVC

Java / Java multithreading

Node.js / Express.js

MySQL / TSQL

PHP

Linux / Bash

Build & Automation Tools / Webpack / NPM

Single Page Application (SPA)

Responsive Web Development

Browser Development Tools

Amazon Web Services (AWS)

REST API Design / Development

Unit Testing / Extreme Programming

Version Control System: GIT / CVS / TFS

Software Design Patterns

Object Oriented Programming (OOP)

Model View Controller (MVC)

Object Relational Mapping (ORM) / Sequeilize.js / Dapper

User Session Management

Full Stack developer with a passion for both writing code and architecting software solutions. Continuously growing and aspiring to master new skills.
Good communicator, team player, and quick learner. Thrive in roles that require quick agile thinking and leadership.

Experience

2019 - present

Full Stack Dev

On.Care

Maintain and develop new features for On.Care's SaaS web app. Full stack development with my special area of expertise being the Angular side of the app.
Languages: *Angular, RXJS, Typescript, .NET, TSQL, C#*
Achievements:
- **Revamped the Angular frontend to a scalable lazy-loading modularized structure. Led the team in implementing it.**

2017 - 2019

Full Stack Dev

Wisdom Tribe

I wore a few hats in this role. Tasked with creating the Tribewise app, developing client websites, and implementing online marketing strategies.
Languages/Frameworks: *Vanilla Javascript SPA, CSS, Node.js (with Express), MYSQL, Sequelize.js (ORM)*

Achievements:
- **Tribewise app frontend - Created a Single Page Application with a custom front-end framework in VanillaJS - ES6.**
- **Tribewise app backend - Built a full suite of backend API services for content, user sessions, and third-party API integrations**
- **Tribewise app production - Setup the production environment on AWS Linux EC2 instances with database sitting in AWS RDS .**
- **Created multiple websites for clients of Tribe Creative Agency.**

2017

Front End Dev

Mercava

Implemented UI/UX for our web educational platform as a Single Page App.
Languages: *Vanilla Javascript SPA, CSS, HTML*

This role involved working on an educational web app together with a team of 5 developers. The technology stack used was a custom Javascript front-end framework, CSS, and PHP in the backend. I both created and refactored old code and ineffective UX into simpler code and translated it into more efficient user-friendly UX. I quickly became a specialist at styling the UI using the full power of css3 markup with a perfectionist's eye for detail and design.

Achievements:
- **Successfully architected and coded numerous complicated layered UI/UX interfaces with efficient and seamless backend integration.**

2016

Java (Back End) Systems Application Developer

EZX Inc.

Developed server-side utilities for the companies real-time messaging and trading applications.
Languages: *Java, MySQL, BASH*

In this role, I gained valuable experience with writing real Java applications, unit testing, Linux server admin, bash scripting, MySQL and MySQL stored procedures, and application software design patterns. I learned how to conceptualize an application's architecture before coding it, quick precise problem solving, and good debugging strategies.

Achievements:
- **Java order recovery utility to go through multiple databases, logs, and system layers to rebuild thousands of orders and close any open positions in case of server failure.**
- **Java report software that would daily index our huge databases of client orders and accept filters and search parameters so that support staff good easily and quickly link client queries to various system events.**
- **Bash script cron job to expedite the export and backup of massive databases daily by copying and restoring raw MySQL InnoDB and MyISAM tables to our backup servers.**
